DETAILED ACTION

Drawings

The informal drawings are not of sufficient quality to permit examination. Accordingly, replacement drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to this Office action. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action.

Allowable Subject Matter

Claims 1-17 and 19-74 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1, 14 and 37, the prior art fails to teach "adaptively truncating the estimated channel impulse response in the time domain to improve a signal-to-noise ratio of the channel estimates", as cited in the claims.

Regarding independent claim 25, it is allowed for the reasons as stated in applicant's response filed on 12/07/07 page 17.

Regarding independent claim 47, the prior art fails to teach "for each of the receive antennas, computing a channel impulse response for one of the transmit antennas using the impulse coefficients, wherein computing a channel impulse response includes adaptively truncating the channel impulse response in the frequency domain", as cited in the claim.

Regarding independent claim 58, the prior art fails to teach “transmitting, at each of a plurality of transmit antennas, training signals comprising both an IEEE 802.11a standard preamble and a MIMO preamble, wherein the MIMO preamble is a preamble transmitted over two or more of the transmit antennas”, as cited in the claim.

Regarding independent claim 69, the prior art fails to teach “transmitting, using the at least one transmit antenna, one or more training symbols usable by a receiver to estimate a channel response over a legacy set of OFDM subcarriers”, and “transmitting, using the at least one transmit antenna, one or more additional training symbols usable for estimating channel response over an additional set of OFDM subcarriers.”, as cited in the claim.

Regarding independent claims 74, the prior art fails to teach “adaptively truncating the estimated channel impulse response in the time domain”, as cited in the claims.
